Chapter 1

Solve the literal equation for y.

21. $3x + 2y = \frac{12 - 3x}{2}$
 $y = 6 - \frac{3}{2}x$

23. The volume V of a cone is given by the formula $V = \frac{1}{3}\pi r^2 h$, where r is the radius of the base and h is the height.

a. Solve the formula for height h .

b. A cone has a volume of 120π cubic centimeters and a radius of 6 centimeters. What is the height of the cone?

24. A rectangular garden has a length that is five less than twice the width. The garden perimeter is 50 meters. What are the dimensions of the garden?

25. A necklace chain costs \$15. Beads cost \$2.75 each. You spend a total of \$28.75 on a necklace and beads before tax. How many beads did you buy in addition to the necklace?

26. Consider the equation $\left| \frac{1}{4}x + 12 \right| = \frac{x}{2}$. Without calculating, how do you know $x = -16$ is an extraneous solution?

27. Your soccer team wants to buy T-shirts. You call two different companies about prices. Each company charges a price per T-shirt and a set-up fee to create the team logo.

a. The total cost is the same for each company. How many T-shirts is the team buying?

b. A few players decide not to get T-shirts. Which company has a lower cost?

	Logo set-up fee	Price per T-Shirt(s)
Company A	\$50	\$15
Company B	\$95	\$12

$50 + 15s = 95 + 12s$
 $-12s \quad -12s$
 $50 + 3s = 95$
 $-50 \quad -50$
 $3s = 45$
 $\frac{3s}{3} = \frac{45}{3}$
 $s = 15$

(25) total = chain + cost per bead
 $total = 15 + 2.75b$
 $28.75 = 15 + 2.75b$
 $-15 \quad -15$
 $13.75 = 2.75b$
 $\frac{13.75}{2.75} = \frac{2.75b}{2.75}$
 $5 = b$
